Substance Abuse Challenges: Medical Consequences

Substance abuse is a leading cause of illness and death in our nation. It can:

- Lead to unintentional injuries and violence.
- Exacerbate medical conditions (e.g. diabetes, hypertension, sleep disorders).
- Exacerbate neuropsychiatric disorders (e.g. depression, sleep disorders).
- Induce medical diseases (e.g. stroke, dementia, hypertension, cancers).
- Induce infectious diseases and infections (e.g. HIV, Hepatitis C).
- Affect the efficacy of prescribed medications.
- Be associated with abuse of prescription medications.
- Result in low birth weight, premature deliveries, and developmental disorders.
- Result in dependence, which may require multiple treatment services.

Conclusion: Substance abuse has a major impact on public health.
Substance Abuse Challenges:
19.7 Million Americans Are Current* Users of Illicit Drugs

*past month users

Source: SAMHSA, 2005 National Survey on Drug Use and Health (September 2006).
Substance Abuse Challenge:

Non-Medical Use of Psychotherapeutics

Conclusion: Increase in non-medical use of prescription drugs among 18 – 25 year olds since 2002. Non-medical use of opioid analgesics is most significant contributor to the problem.
Substance Abuse Challenge:
Prescription Drug Sources: Primarily Friends or Family

Sources of Opioid Pain Relievers Used Non-Medically
(Accounts for 73% of prescription drug abuse)

Substance Abuse Challenge: Early Onset of Use and Dependence

Percent of people in treatment who first used substance before age 15

Conclusion: Dependence is a higher risk if use begins before age 15

Source: SAMHSA, 2004 Treatment Episode Data Set.
Conclusion: The vast majority of people with a diagnosable illicit drug or alcohol disorder are unaware of the problem or do not feel they need help.

Source: SAMHSA, 2005 *National Survey on Drug Use and Health* (September 2006).
Interrupting Progression to Dependence Can Reduce Need for Treatment and Recovery Services

A Public Health Solution: Screening, Brief Intervention (SBI)

Substance abuse leads to significant *medical*, social, legal, financial consequences.

Excessive drinking, illicit drug use, and prescription drug misuse are often undiagnosed by medical professionals.

The brief intervention itself is inherently valuable, and positive screens may not require referral to specialty treatment.

Early, brief interventions are clinically effective and cost-efficient.
Definitions of Screening, Brief Interventions, and Brief Treatments

**Screening:** Brief questionnaire yields a score that identifies and quantifies substance abuse and associated problems.

**Brief Intervention (BI):** Give feedback about screening results, inform patient about consuming substances, advise on change, assess readiness to change, establish goals, strategies for change, and follow-up.

**Brief Treatment (BT):** Enhanced level of intervention with more than one session.

**Referral (RT):** Referral to treatment for substance abuse or dependence.

Source: SAMHSA. A Guide to Substance Abuse Services for Primary Care Clinicians TIP Series No. 24 (1997)
SBI Procedures: Follow-up Action Depends on Score

- **Screening Score**
  - **Negative Screen**
    - Positive Reinforcement
      - Moderate Use: Brief Intervention
      - Moderate/High Use: Brief Treatment
  - **Positive screen**
    - Abuse/Dependence: Referral to Treatment
Screening and Brief Interventions in Healthcare Settings Work

SBI can have a Major Impact on Public Health

Substance abuse

*SBI may reduce alcohol use significantly*

Morbidity and mortality

*SBI for alcohol reduces accidents, injuries, trauma, emergency dept visits, depression*

Health care costs

*Studies have indicated that SBI for alcohol saves $2 - $4 for each $1.00 expended*

Other outcomes

*SBI for alcohol may reduce work-impairment, reduce DUI, improve neonatal outcomes*

There are grounds for thinking SBI may:

- stem progression to dependence.
- improve medical conditions exacerbated by substance abuse.
- prevent medical conditions resulting from substance abuse or dependence.
- reduce drug-related infections and infectious diseases.
- improve response to medications.
- identify those at higher risk of abusing prescription drugs.
- identify abusers of prescription drugs or OTC drugs.
- have positive influence on social function.
Reduction in Substance Abuse
May Improve Overall Health

A few examples:

- **Stroke and cocaine or amphetamine**: Stroke in young adults who abuse amphetamines or cocaine: a population-based study of hospitalized patients. Westover AN, McBride S, Haley RW. *Arch Gen Psychiatry.* 2007 Apr;64(4):495-502.

- **Medical and psychiatric conditions of alcohol and drug treatment patients in an HMO**: comparison to matched controls. Mertens JR, Lu YW, Parthasarathy S, Moore C and Weisner CM. Medical and psychiatric conditions of alcohol and drug treatment patients in an HMO: comparison to matched controls. *Arch Intern Med.* 2003;163:2511-7.
SBI Procedures May Be Reimbursable

- **New Level II HCPCS Codes:** (Medicaid services) Centers for Medicare and Medicaid Services published two new HCPCS procedure codes effective January 2007.

- **The Federal Government:** has calculated its contributions to reimburse for use of the State Medicaid codes.

- **States:** can choose to adopt the Medicaid Codes and reimburse for the procedures.

- **Alphanumeric Codes:**
  - H0049 Alcohol/Drug Screening – Alcohol and/or Drug Screening
  - H0050 Alcohol/Drug Service 15 min – Alcohol and/or Drug Service, Brief Intervention, per 15 minutes
Support for SBI is Growing

- **Accreditation Council for Continuing Medical Education (ACCME):** is highlighting SBI as an example of how providers of continuing medical education can meet or exceed ACCME’s new accreditation standards for courses.

- **American College of Surgeons:** requires Level I Trauma Centers to produce evidence of alcohol SBI as part of verification process.

- **The US Preventive Services Task Force (2004):** recommended screening and behavioral counseling for all adults, including pregnant woman, in the primary care settings.
What Can You Do?

• Develop or attend CME courses that teach SBI.
• Implement SBI in your healthcare system.
• Develop an electronic record system for SBI.
• Work with your State to implement the HCPCS Level II (Medicaid) codes for SBI.
• Incorporate SBI training into medical education and continuing medical education.
• Disseminate SBI in healthcare settings throughout hospitals, clinics, and other community-based healthcare systems.
• Help change the burden of substance abuse in your community.
Where Can You Receive Training?

SAMHSA/ACS SBI Training Sessions

- Seattle    March 15
- Denver     April 12
- Dallas     May 4
- Chicago    June 5
- Washington DC June 15
- Boston     July 12
- Los Angeles July 26
- Philadelphia August TBD
- Atlanta    September 11
- Las Vegas  September 27

Future dates are tentative. For information about the sessions visit SAMHSA’s SBIRT website: www.sbirt.samhsa.gov
Thank you….

With gratitude to Federal partners (SAMHSA, NIDA, NIAAA, CMS), ACCME, AMA and medical professionals who have advanced these concepts.
