STRENGTHENING OF INFORMATION SYSTEMS ON DRUG TRAFFICKING AND CHEMICAL DIVERSION THROUGH STUDIES ON DRUG CHARACTERIZATION AND IMPURITY PROFILING
Strengthening of information systems on drug trafficking and chemical diversion through studies on drug characterization and impurity profiling
Background

• Emergency of the phenomena of “PACO”

• Increasing amounts of clandestine laboratories discovered in urban areas.

Limitations of available information

• Limitations of the statistical information on seizures (seized substances and clandestine laboratories).

• Lack of an unified register of chemical analysis made on seized substances.

• Not all relevant aspects are taken into account in the analysis.

• The analysis of the seized substances is incomplete.
Use of drug analysis produced by laboratories (scientific data) in support of law-enforcement operational work, destined to establish links between drug samples. It consists on the collection and sharing of standardized physical and chemical information on seized substances, including the analysis use of impurity alterations traces to link different samples of drugs.

Purity profiling and drug characterization

• Manufacturing methods

• Chemical products involved

• Original Plants

• Countries or regions of origin

• Distribution patterns

Purity profiling and drug characterization

- Purity
- Cutting agents
- Quality
- Alkaloid contents
- Clandestine laboratories capacity

“Use of drug characterization and chemical profiling in support of drug law enforcement intelligence-gathering and operational work, as well as trend analysis”.
Main Aspects of the Project in Argentina

• Chemical Analysis of Seized Substances
  - Drug Characterization
  - Impurity profiling

• Study on Clandestine Laboratories Discovered
  - New data collection system
  - Analysis of judicial cases
Strengthening of the Information Systems

• Limitations of available information.

• Diversity among countries.

• Need to improve the existing systems of information in the hemisphere.
