- ▶
- ▶ **Court Data:** Type of Crimes or offences, Number of adjournments, End Result (Convicted, Dismissed, Withdrawn), Reason for Withdrawal and Dismissal.

# Method Used to Gather Data

- ▶ The office received a daily situation report (SITREP) from all formations country wide in regards to reports made at the station, and also utilize the Crime Information Management Systems (CIMS) to synchronize with the reports received.
- ▶ A monthly return for all Traffic Accidents, and Court Data is also produce to JICC, these data are entered into an Excel spreadsheet where it is analyze.

# Types of Analysis performed

- ▶ Some of the analysis performed by JICC includes comparison of Major Crimes for the present month with previous months, the same month of previous years, or year by year comparison, comparison by Formations, Districts, or a specific crime (Murder, Robbery, Burglary...), most common causes of traffic accidents, most type of drugs and firearm seized and found, also comparison with previous months, years, formation, district.
- ▶ Another analysis JICC produce is Hotspot analysis using ARC GIS Pro, and ARC GIS Online. These analysis include word documents, Excel Graphs, Excel tables, Hotspot Mapping.

# Types of Reports Produced

- Monthly Reports
- Annual Reports

# How the Information is Used

- ▶ These information are used to aid the Minister, Ministry, Commissioner and Commanders in decision making about when and where police presence are vital and to direct policy and resources.
- ▶ It also educate the public about the crime situation in their area, safe spots, and crime hotspots to avoid.
- ▶ Students request information from the office to conduct school projects and other assignment etc.

Thank You!
